

Diagram illustrating the contraction of two vertices, B^{σ_i} and $B^{\sigma_i \dagger}$, resulting in the identity operator I .

The left side shows two vertices, B^{σ_i} (left) and $B^{\sigma_i \dagger}$ (right), connected by two internal lines. The external lines on the left and right are directed to the left. The internal lines are directed to the right. The vertices are represented by blue triangles.

The right side shows a single horizontal line with an arrow pointing to the left, labeled I .

$$B^{\sigma_i} \text{---} B^{\sigma_i \dagger} = I$$
